

DOUBLE CHANNEL: Gives the practitioner the possibility of performing treatments on two areas of the body at the same time, using the two channels in both automatic and manual modes.

ROLL ON: Our patented ergonomic handpiece allows the active ingredients to be delivered directly into the affected tissue, without the use of needles. Thanks to the action of diathermy, the active ingredient penetrates deeper and faster for faster and longer-lasting results.

AUTOMATIC: Let our device take care of your client! With this working mode, thanks to the automatic plates, you can support your work with the handpiece or you can treat areas of the body in complete autonomy without the need for the presence of a professional.

BIPOLAR: Without the need to use a passive plate, the practitioner will only use the handpiece to treat areas of the body that are difficult to reach with other types of electrodes, such as the face or hands.

WHAT IS DVINA

dVina is a state-of-the-art Tecar device designed specifically for the personal wellness and anti-aging sector. The therapy promotes cellular rejuvenation processes, improving conditions such as cellulite, water retention, various blemishes and stretch marks, acne and other imperfections, by promoting vasodilation and the elimination of toxins and free radicals.

The capacitive and resistive mode makes it possible to act in a targeted and complementary manner on those parts of the body subject to lymphoedema, water retention and cellulite. The sensation perceived is that of an intense warming massage, with rapid and visible results right from the first session, where the skin appears more compact and toned, thus reducing the so-called "orange peel" effect.

Thanks to our patented Roll On Handpiece, different active ingredients can be delivered to various areas of the body without the need for needles.

The top-of-the-range version adds the possibility of working with two channels in parallel, so that two areas of the body can be treated at the same time.

WHAT EFFECTS DOES IT HAVE?

FACE AND DECOLLETE

dVina regenerates skin tissue, firming facial muscles. The results are immediate, visible from the first session.

NON-SURGICAL LIFTING

Cellular tone and regeneration in a short time, for a deep and complete rejuvenation.

BREAST

dVina fights skin relaxation, firms and reshapes the breast with immediately visible results.

FIRMING

By stimulating the bio-regeneration process, dVina improves both the tone of the deep tissues and the function of the superficial layers of the epidermis.

GLUTES

By strengthening the muscle, dVina firms and reshapes the buttocks in a non-invasive treatment.

CELLULITE

dVina acts on the main cause of cellulite, poor blood circulation, by restoring the correct functions and stimulating the metabolism (also through the vehiculation of drugs).

TWO VERSIONS TO CHOOSE FROM

ONE PLUS	TWO PLUS	
✓	✓	Capacitive electrodes No. 3
✓	✓	Resistive electrodes No. 3
✓	✓	Capacitive handheld
✓	✓	Resistive handheld
✓	✓	Bipolar electrode S
✓	✓x2	Passive plate
✓	✓x2	Active plate
✓	✓	Capacitive roll on electrode M
✓	✓	Resistive roll on electrode M

Thanks to the important draining capacities of our equipment, the activation of the microcirculation and the restoration of the correct fat metabolism, it is now possible to carry out non-invasive skin biostimulation treatments.

dVina ONE PLUS is suitable for creating personalised and highly effective work protocols that optimise treatment time for rapid and lasting results. dVina ONE PLUS offers the unique possibility of working with two automatic capacitive electrodes that do not require the presence of an operator.

dVina TWO PLUS represents the maximum application of Diathermy in aesthetics. Combining the most useful and effective features of our machines, from the extremely complete equipment to the possibility of carrying out two treatments at the same time, it offers the exclusive possibility of being able to work not only with the manual capacitive and resistive electrodes, but also with two automatic capacitive electrodes that do not require the presence of the operator, on two areas of the body at the same time.
